

J.A.G. automatic drainpipe cleaning device

For cleaning clear water drainpipes

- Available as an automatic device
- For cleaning tangential clear water drainpipes

The brush carriage is located under the bridge, thus being optimally directed towards the drainpipes arranged in a star shape facing the middle of the basin.

A switch vane fixed to the basin rim allows to position the brush carriage over the drainpipes, and a cleaning process is activated.

For maintenance purposes / brush replacement, the brush carriage can be lifted onto the bridge without any problems.

Pipe cleaning device - technical summary

Pipe cleaning device with a brush carriage and rigid brushes for motorized cleaning of the extraction inlets on clear water drainpipes

- Compensation of the installation of the star-shaped drainpipes through hanging rail construction
- Drive 0.37 kW

- Material steel components 1.4301, in underwater area 1.4571
- Drive with brush can be lifted up to the bridge for maintenance purposes
- Brush with low-wear Brasif bristles, brushes replaceable

Beyond this we supply:

Wastewater treatment equipment
Rotary and suction sludge scrapers
Longitudinal and suction sludge scrapers
Rabble rake devices
Manual and automatic track cleaning
Horizontal cleaning
